Individual Assignment 1: Mathematical Autobiography

Due: Tuesday, September 4

Write a mathematical autobiography. Include the list (titles of courses, not just numbers) of the mathematics courses you have taken in college, and reflect on which were your favorites and which were hardest. Describe your mathematical interests, and your post-graduation plans. Explain why you have chosen to register for this course and what you expect from it.

Format: Length: 1-2 pages (250-500 words)
Font: 12-point Times New Roman or similar
Layout: double-spaced and 1" page margins

Be creative and tell your story in complete sentences. One of the purposes of this assignment is to give me a sample of your writing style (the other purpose is to get to know you and your interests).
