**COURSE OVERVIEW**

Math 2010 is a mathematics course, and so the primary goal is to improve, broaden, and deepen your facility with and understanding of school mathematics. In order for you, the teacher, to help children develop persistence and flexibility, build on one another's ideas, and communicate and justify their findings, you too must be successful, confident problem-solvers with a deep understanding of fundamental mathematics. In particular, you should finish this semester with a solid understanding of the concepts covered as well as comprehension of why the various procedures work the way they do.

Numeracy, the ability to represent, communicate, and interpret quantitative information, has become an integral part of our social definition of literacy, and it is stressed in the Common Core Standards for Mathematical Practices that as a teacher you will be responsible to develop in your students. Thus, another goal for the course is to strengthen your spoken and written communication within mathematics. Writing well in mathematics requires fluency in the precise descriptive language of mathematics and careful logical organization. The writing portions of assignments will also serve to start you on your way to making the transition from learner to teacher of mathematics. While we will address different ways of approaching the material, this course is primarily about mathematics; it will prepare you for taking the methods course in the School of Education where you will focus on how to teach it.

**COURSE REQUIREMENTS**

PSYC 1100 and three credits of Mathematics other than MATH 1010. Not open for credit to students who have passed MATH 2110 or 2410 or 2130. This course is restricted to students in the Elementary Education Program at the Neag School of Education.

**COURSE INFORMATION**

**Tentative coverage:** Chapter1--Chapter 7 (some sections may be omitted)

**Other materials:** I will supplement our textbook throughout the semester. Make sure you receive a copy of all supporting materials. Homework and important announcements will be posted on HuskyCT. Plan on checking the site regularly, at least twice a week in preparation for class.

**Class meeting format:** This course is structured to provide you with the experience of developing your own mathematical ideas. Our classroom will be a student-centered classroom where I will take the role of facilitator guiding you in the learning process, helping you when you get stuck and providing the over-arching context for what you are doing. The important point is that you will be doing rather than listening to lectures. You will work on activities that will lead you toward understanding of concepts behind familiar operations as well as some new ideas. We will often work in collaborative groups of 2 or 3 to stimulate dialogue between you through "hands-on" activities and systematic inquiry (to communicate understanding,
justify your thinking, and pose new problems). Participation is extremely important in this course. It will be assessed using the rubric attached at the end of this syllabus.

**Useful items:** Pencil, eraser, a 3-ring binder, a calculator (no Cell-phone calculators allowed in class!), colored pencils, and a clear plastic ruler.

- The best way to insure your successful completion of this course is to **come to class, take careful notes, and keep up with the assigned problems and quizzes!**
- **This is a challenging 2000-level course:** 2 student hours devoted to assignments and preparation for every hour of classroom time is a reasonable expectation for an average student.
- Barring unforeseen medical or other serious conditions, I expect you to be in class on time every day. **If you must miss a class, please let me know** (email me or call 486-3442) prior to class time and be sure to contact a classmate to find out what you missed. Submit collected work **before the next class meeting.**

_________________________________________________________ (classmate 1)

_________________________________________________________ (classmate 2)

- **If your expectations are not being met see me immediately.** If you think you are in danger of failing (or of getting a grade that you do not want) you should see me immediately. I will not give you any extra credit assignments or an incomplete to help you avoid failing, but I can make recommendations regarding drops, study habits, test taking skills, future courses, etc.

**COURSE ASSIGNMENTS**

**Reading Assignments and Lecture Notes:** As a future teacher, you should be able to read and understand mathematics textbooks recognizing “Big Ideas,” important concepts and results. In this course you will be asked to read sections of the book and take notes of readings. The notes you take will serve as **your lecture notes.** Make sure your notes are complete, organized, and up-to-date. I recommend that you keep all lecture notes, activities, homework solutions, and any graded work in a 3-ring binder.

**Homework and Quizzes:** Homework problems will be assigned each class period. These problems will not be collected, however, you are still expected to complete them since the quizzes in class will be based off of this material. If you can successfully complete the homework problems, then you should be able to do well on the quizzes. Not all problems can be done in one minute. If you are having trouble with a problem, look over the text and your notes to see if you can find an idea that helps you get started. If you are still having problems, please make an appointment to see me for help. Note that waiting until many problems accumulate before a quiz or a test is never a good strategy. I may not be able to offer the help you need to succeed in a quiz or a test but I am here to help you learn the material in the natural progress of the semester. Please prepare your questions carefully before our meeting. If your question is related to a homework problem, you should be ready with a statement of the problem, what you were able to do with the problem, and the nature of the difficulty. Spending time searching for the statement of a problem and formulating your question after you have been recognized is discourteous to your peers who might also be taking advantage of office hours. In-class quizzes will be given regularly and will be announced one week in advance.
Submitted work guidelines: Submitted work (quizzes and exams) should be neat, organized, and clearly presented. Prose explanations of your work should be regularly included and the answers to application problems should always be interpreted in terms of the original question using complete English sentences. The explanation is the most important part of any solution.

Tests and Final Exam: Two in-class tests will be given this semester. The second test will cover all the material that remains untested. The tentative dates are indicated below. The final exam is cumulative covering all the material presented throughout the semester.

ABSENCES: You are responsible for completing your lecture notes (contact person), complete in-class activities, and submit any collected work before the next class meeting. Special accommodations for emergency situations need to be arranged with me as soon as possible.

EVALUATION

Exams are tentatively scheduled for
Exam 1: Thursday, October 5
Exam 2: Thursday, November 16
Final Exam: TBA

Grading Scale:
Participation: 10%; Quizzes: 20%; Exam 1: 20%; Exam 2: 20%; and Final (Cumulative): 30%

Make-up policy: Make-up exams will be given within a week from the original and only under extreme situations. If you need to miss an exam, you need to notify me as soon as possible to work on the necessary arrangements, including appropriate documentation. There will be no makeup quizzes. The lowest quiz grade will be dropped at the end of the semester. If you miss a quiz that will be the quiz grade that is dropped.

Attendance: As future teachers, I expect that you are committed to learning and will not miss class. A lot of what I hope will happen for you in this course will take place inside the classroom, working in groups and talking with others. Most of the times you will be asked to write up your ideas and solutions, and always you are expected to think about the problems, participate in solving them, and communicate your ideas with others. Arriving late (after we have started class) or leaving early is disruptive and disrespectful. If however, you cannot avoid it, please arrange in advance with me.

COURSE POLICIES

This course follows the university policies regarding the topics listed below. For details, please visit: http://provost.uconn.edu/syllabi-references/
Special Learning Arrangements, Academic Honesty and Integrity, Final Exams, Policy Against Discrimination, Harassment and Related Interpersonal Violence, Sexual Assault Reporting Policy, Statement on Absences from Class Due to Religious Observances and Extra-Curricular Activities

Final exam week for Fall 2017 takes place from Monday, December 11th through Sunday, December 17, 2017. Students are required to be available for their exam during the stated time. If you have a conflict with this time, you must visit the Dean of Students Office to discuss the possibility of rescheduling this exam. Please note that vacations, previously purchased tickets or reservations, social events, misreading the exam schedule and over-sleeping are not viable excuses for missing a final exam. If you think that your situation warrants permission to reschedule, please contact the Dean of Students Office with any questions.
